

# SimplySNAP Zone Worksheet

**Instructions:** Zones can be created after completing the MAC Address Tracking Worksheet. Using your site drawing and the “Blueprint ID” numbers from the MAC Address worksheet, you can now identify which lights should be grouped together into zones. These zones are used for programming behavior schedules during the commissioning phase of the installation. *Note that a device (light) can be associated with multiple zones.*

Zone Name	Blueprint ID # for Lights in Zone	Zone Behavior(s)
Example: Perimeter Lights	Example: 11-19, 21-24, 29	Example: Dim 30% 1 hour before sunset, 80% at sunset, 50% 1 hour before sunrise, Off 1 hr after sunrise M-F
